3 OPEN POSITIONS • EUROPEAN R&D HUB (MUNICH)

Apple Global Internships 2026: Direct Application Guide

Verified application portals for Apple's European Silicon Design and Vision Group in Munich, Germany. Spans Apple Vision Pro Generative AI research, AI-assisted cellular baseband debugging, and core cellular systems software.

TARGET BATCHES	PRIMARY CAMPUS	PPO CONVERSION
2025, 2026, 2027 Batches	Munich, Germany (Europe)	High (~85%+ Conversion)

VERIFIED OPEN POSITIONS (CLICK 'APPLY NOW' FOR DIRECT APPLE PORTAL)

1. Research Scientist Intern – Human-Centric Generative AI

Apply Now ➔

Job ID: 200690377 • Team: Europe Vision Group (EVG)

Develop cutting-edge generative AI algorithms modeling photorealistic humans in complex 3D scenarios. Directly powers Apple Vision Pro features like Persona, Portrait Lighting, and Spatial Computing.

PyTorch / JAX | Diffusion Models | 3D Gaussian Splatting | NeRF | Vision Pro | Multi-Modal AI

2. Software Engineering Intern – AI-Assisted Baseband Debugging

Apply Now ➔

Job ID: 200689711 • Team: Wireless Technologies & Ecosystems (WTE)

Build an evaluation framework comparing LLM strategies for cellular baseband debugging. Develop pipelines where LLMs interact directly with debuggers on raw core dumps vs structured crash logs.

LLM Applications | Python | C / C++ | GDB / LLDB | 5G / LTE Baseband | Automated Evaluation

3. Internship – Software Engineering (Cellular & Connectivity)

Apply Now ➔

Job ID: 200690139 • Team: Cellular Software & Connectivity

Work across layers on groundbreaking cellular technologies powering iPhone, iPad, Apple Watch, and Mac. Develop core wireless protocols and optimize power, reliability, and network throughput.

C / C++ | Embedded Systems | 5G / LTE Protocol Stack | RTOS | Socket Programming | ARM Architecture

ROLE BREAKDOWN & CORE COMPETENCIES EVALUATED

🧠 Generative AI & Vision (200690377)

- **3D Geometry & Representation:** Neural Radiance Fields (NeRF), 3D Gaussian Splatting, and parametric human mesh models (SMPL/SMPL-X).
- **Generative Architectures:** Latent Diffusion Models (LDM), score-based generative modeling, and multi-modal transformers.
- **Deep Learning Tooling:** PyTorch, JAX, CUDA kernels, and distributed GPU training.
- **Research Rigor:** Experimental methodology, ablation studies, and publication track record.

⚡ AI Baseband Debugging (200689711)

- **LLM Agent Workflows:** Tool-calling, function calling, structured prompt chaining, and evaluation metrics (precision, recall, reasoning accuracy).
- **Low-Level Debugging:** Using GDB/LLDB to inspect stack frames, registers, and memory dumps.
- **System Python & Telemetry:** Parsing binary crash dumps, extracting telemetry logs, and automating test runs.
- **Cellular Fundamentals:** Basic understanding of 3GPP standards, LTE/5G state machines, and baseband subsystems.

📡 Cellular Software Engineering (200690139) – Core Systems

- **C/C++ Mastery:** Deep knowledge of memory layout, pointers, data structures, and memory-safe design.
- **Real-Time Systems (RTOS):** Task scheduling, interrupt handling, inter-process communication (IPC), and mutexes/semaphores.
- **Wireless Protocol Stack:** NAS, RRC, MAC, PHY layers, connection management, and mobility handovers.
- **Performance Optimization:** Profiling battery consumption, minimizing CPU wakeups, and optimizing throughput.

APPLE INTERVIEW STRUCTURE & EVALUATION ROUNDS

Round 1 **Recruiter Screen & Background Fit (20 Mins):** Verification of university enrollment, expected graduation date, passion for Apple ecosystem, and high-level technical background.

Round 2 **Technical Coding & Fundamentals (60 Mins):** Live coding in C++/Python, data structures, algorithm efficiency, and domain-specific questions (computer vision, ML, or OS/concurrency).

Round 3 **System Design & Architecture with Team Leads (2× 45 Mins):** Deep dive into your prior projects, real-world debugging scenarios, user-centric product empathy, and collaboration fit.

30 HIGH-SCORING APPLE KEYWORDS (INCLUDE IN RESUME)

PyTorch | Diffusion Models | 3D Gaussian Splatting | NeRF | Apple Vision Pro | Computer Vision | C / C++ | LLM Evaluation | GDB / LLDB | 5G / LTE Baseband | Embedded Systems | RTOS | Multi-Modal AI | Spatial Computing | Crash Dump Analysis | ARM Architecture | Socket Programming | Multithreading | CUDA | Git Version Control | CI/CD Pipelines | Memory Management | Algorithm Optimization | Persona | Python Scripting | JAX | 3GPP Specifications | Network Telemetry | Open Source | Human-Centric AI

COLD LINKEDIN OUTREACH TEMPLATES (FOR APPLE ENGINEERS & MANAGERS)

Template A: For Apple Engineering Managers / Vision Research Leads

Copy & Personalize

```
Hi [First Name],

I hope you're having an inspiring week! I've been closely tracking Apple's breakthroughs in
spatial computing, particularly the Europe Vision Group's work on Persona and human-centric 3D
generative modeling.

I am an engineering student specializing in computer vision and generative models (PyTorch,
NeRF, 3D Gaussian Splatting). I recently applied for the Research Scientist Intern – Human-
Centric Generative AI role (Job ID: 200690377) in Munich. My research project on [Name of Your
Project / Link] directly tackles multi-modal 3D human synthesis.

If you have a brief moment, I'd love to share my portfolio and research summary. Thank you for
your time and craftsmanship!

Warm regards,
[Your Name] | [GitHub / Portfolio Link]
```

Template B: For Apple Campus Recruiters

Copy & Personalize

```
Hi [Recruiter Name],

I recently submitted my application for the [GenAI Research / AI Baseband / Cellular Software
Intern] position (Job ID: [Job ID]) at Apple's Munich Hub.

As a student proficient in [PyTorch / C++ / Embedded Systems / LLMs], I have built several
projects that align with Apple's focus on technical elegance and user-centric design.

My application is live on the Apple Jobs portal, and I would be thrilled to discuss how my skill
set and passion can contribute to the team this season.

Best regards,
[Your Name]
