3 OPEN POSITIONS • EUROPEAN R&D CAMPUS

Intel Global Internships 2026: Direct Workday Guide

Official application portals for Intel Technology Poland (Gdansk R&D Hub) across Linux Core OS validation, Infrastructure QA automation, and Media AI software. Includes ATS keyword checklist and direct application URLs.

ELIGIBLE BATCHES	PRIMARY CAMPUS	PPO OPPORTUNITY
2025, 2026, 2027 Batches	Gdansk, Poland (Europe)	High (~85% Conversion)

VERIFIED OPEN POSITIONS (CLICK 'APPLY NOW' FOR DIRECT WORKDAY PORTAL)

1. System Software Engineering Intern

Apply Now ➔

Requisition ID: JR0288207 • Team: Linux Core OS Validation (DCG)

Validate and optimize the Linux Kernel and low-level system software running on next-generation Intel Xeon server platforms. Build automation tools in C/Bash/Python and debug hardware-software interactions.

C Language | Linux Kernel | Bash Scripting | Python | CI/CD Pipelines | Kernel Drivers

2. Intern Software QA Test Engineer

Apply Now ➔

Requisition ID: JR0288220 • Team: IPL QA (Infrastructure Product Line)

Develop and execute automated test suites for infrastructure and DevOps software. Implement test scripts in Python/Bash/Java, integrate automated testing into Jenkins/GitHub Actions, and analyze system reliability.

Python / PyTest | Docker | Jenkins CI/CD | Bash | Agile/SDLC | Test Automation

3. Media AI Software Intern

Apply Now ➔

Requisition ID: JR0288216 • Team: Datacenter Media Software

Work at the intersection of real-time video/audio broadcast transport and artificial intelligence. Build AI agent workflows for video search, optimize voice codecs SDKs, and contribute to SMPTE ST 2110 open-source libraries.

C / C++ | AI / ML Workflows | Python | FFmpeg & Codecs | SMPTE ST 2110 | Xeon Hardware

ROLE BREAKDOWN & CORE COMPETENCIES EVALUATED

⚙️ System Software (JR0288207)

- **Operating System Internals:** Processes, threads, virtual memory, paging, and kernel vs user space.
- **C Programming & Memory:** Pointers, dynamic allocation (`malloc`/`free`), structure alignment, and buffer boundaries.
- **Linux Shell Fluency:** Advanced Bash scripting, grep, awk, sed, file permissions, and process management.
- **Debugging Skills:** Using `gdb`, reading `dmesg` logs, and inspecting kernel panic stack traces.

🧪 Software QA & DevOps (JR0288220)

- **Testing Fundamentals:** Unit vs Integration vs System vs Regression testing methodologies.
- **PyTest & Scripting:** Writing test fixtures, parameterized tests, and assertions in Python.
- **DevOps & CI/CD:** Docker basics (writing Dockerfiles), running test containers, and GitHub Actions triggers.
- **Defect Lifecycle:** Root-cause analysis, defect reproduction steps, and structured bug tracking.

🤖 Media AI Software (JR0288216) – Specialized Requirements

- **Real-Time Media Transport:** Understanding SMPTE ST 2110 standard (audio/video streams over IP networks) and packet buffering.
- **Audio/Video Processing:** Working with FFmpeg, color spaces, voice codec compression, and hardware acceleration on Intel Quick Sync / Xeon.
- **AI Agent Workflows:** Using Python & LLMs for transcription, multimodal video semantic search, and object detection pipelines.
- **Networking & Lab Setup:** Configuring high-speed Ethernet NICs (10/25/100 GbE), switches, and network traffic benchmarking.

INTEL INTERVIEW STRUCTURE & EVALUATION STAGES

Round 1 **Workday ATS & Recruiter Screening (15–20 Mins):** Verification of university enrollment, expected graduation batch, and English proficiency.

Round 2 **Technical Coding & OS Fundamentals (45–60 Mins):** Live coding in C/Python, OS questions (concurrency, memory, Linux commands), and discussion of GitHub projects.

Round 3 **Hiring Manager & Architecture Discussion (45 Mins):** Problem-solving adaptability, low-level debugging scenarios, culture fit, and eagerness to learn.

30 HIGH-SCORING WORKDAY KEYWORDS (INCLUDE IN RESUME)

Linux Kernel | C / C++ | Python | PyTest | Bash Scripting | Git / PRs | CI/CD Pipelines | Docker | Jenkins | SMPTE ST 2110 | System Validation | Regression Testing | Test Automation | Intel Xeon | Device Drivers | FFmpeg | Video Codecs | AI Agents | Semantic Search | GDB Debugger | Ethernet NICs | Defect Tracking | SDLC Agile | Multithreading | Virtual Memory | Kubernetes | GitHub Actions | Root Cause Analysis | Fuzz Testing | Open Source

COLD LINKEDIN OUTREACH TEMPLATES (FOR INTEL ENGINEERS & MANAGERS)

Template A: For Intel Senior Software Engineers (Referral Request)

Copy & Personalize

```
Hi [First Name],

I hope you're having a great week! I've been following Intel's work on Linux Core OS validation
and Xeon server platforms at the Gdansk R&D Hub.

I'm currently an undergraduate in Computer Science with hands-on experience in C, Linux systems,
and automated testing via Python. I noticed the System Software Engineering Intern opening (Req
ID: JR0288207) and my background aligns closely with the validation team's technical focus.

If you have 2 minutes, I'd be grateful if you could glance at my resume or consider submitting
an internal referral. Thank you for your time!

Best regards,
[Your Name] | [LinkedIn / GitHub Profile Link]
```

Template B: For Intel Campus Recruiters / Hiring Managers

Copy & Personalize

```
Hi [Recruiter Name],

I recently applied for the [System Software / QA / Media AI Intern] position (Req ID:
[Requisition ID]) at Intel Gdansk.

As a [3rd/4th year] engineering student proficient in [C/Python/PyTest/Linux], I have built
several projects involving [Kernel debugging / Test automation / Video AI processing] that
mirror Intel's tech stack.

My application is already submitted on Workday, and I wanted to express my strong enthusiasm for
joining Intel's European team. I'd love the chance to discuss how I can contribute!

Sincerely,
[Your Name]
```
